

CARDIAC RHYTHM MANAGEMENT SYSTEM WITH NOISE DETECTOR

ABSTRACT

5 A system, method, or device determines whether noise is present on a
sampled and/or digitized sensed intrinsic cardiac signal based on a moving count of
turning/inflection points of the signal. If noise is detected, the manner in which the
cardiac signal is acquired, or the manner in which the device operates in response to
the acquired cardiac signal (or both) is altered to reduce the risk of erroneously
10 detecting noise as a heart depolarization and, therefore, inappropriately triggering or
withholding therapy.
